Description for the new project

Agenda

Specially developed functionality:
Plugin for car sales:

Users enter their license plate, after which the car's technical data is automatically retrieved via integration with the Danish Motor Registry.

The user then fills in their contact information (name, email and phone number) so that you have their information.

Once the form has been submitted, the user automatically receives an email with the option to create a user profile.

Once the user has created their account, they will have access to a personal dashboard:

Overview of the car they have requested to sell

Approval status

Any inquiries or interested buyers

Option to upload up to 8 pictures of the car, which will be displayed together with the car listing when it is published

The car will automatically appear in your Bilinfo.dk account, where you can review and approve it.

Once the car has been approved and posted in Bilinfo.dk, it will be automatically synchronized and published on the website with your selected information and sales price.

Integrations and development:
License plate lookup (integration with the Danish Motor Register): Automatic retrieval of car information based on registration number.

Synsbasen API: Users can get an assessment and technical data based on the car's inspection history.

SafePay Nordic: Integration with secure payment solution and MitID verification.

Development of frontend and backend including full Bilinfo integration: Automatic synchronization between Bilinfo.dk and your website, so that new car creations on Bilinfo appear directly on your platform.

Santander: Financing module is integrated, so users can easily apply for financing via Santander.

Description for the new project

TASK

This search bar has too look like and have same functionality as the https://www.caro.dk/.
So when you write a platnumber it collect the data from the car from the API.
It has to be the same flow.

Description for the new project

TASK

We are waiting to integrate Santander since they haven't approved it yet. So we're just making a simple contact form for the financing calculator, so when they've filled out the calculator, they should be able to click a button called book advice, and then a form should appear just like on Aksel.nu.

Finansiering

Pris *

🏷 300.000

Rentesats *

Udbetaling

DKK 45.000

Månedlig betaling	Samlet rente	Samlede betalinger
7.643 DKK	**20.133 DKK**	**320.133 DKK**

Gebyrer og incitamenter for ejendomsret og andre gebyrer er ikke inkluderet i denne beregning, som kun er et estimat. Månedlige betalingsestimater er til orientering og repræsenterer ikke et finansieringstilbud fra sælgeren af dette køretøj. Andre skatter kan forekomme.

Description for the new project

TASK

Additionally, when people fill out the contact form on that car, you don't know which car they are contacting, can you do something so that you get information on which car they are contacting?

in relation to tracking clicks on the car under the dashboard, you could do so instead of the number of clicks on the phone number, you could possibly do the number of inquiries on the car 🙂
